

Network Vulnerability Scanner Report

✓ 192.168.40.71

Summary

Overall risk level:

Info

Risk ratings:

Critical: 0

High: 0

Medium: 0

Low: 0

Info: 5

Scan information:

Start time: Mar 05, 2026 / 10:08:27 UTC+07

Finish time: Mar 05, 2026 / 10:16:11 UTC+07

Scan duration: 7 min, 44 sec

Tests performed: 5/5

VPN Profile: Scan Internal

Scan status: Finished

Findings

Open ports discovery

CONFIRMED

Port	State	Service	Product	Product Version
80	open	http	Microsoft IIS httpd	10.0
135	open	msrpc	Microsoft Windows RPC	-
139	open	netbios-ssn	Microsoft Windows netbios-ssn	-
445	open	microsoft-ds	-	-
1433	open	ms-sql-s	Microsoft SQL Server 2019	15.00.2000
5357	open	http	Microsoft HTTPAPI httpd	2.0
5985	open	http	Microsoft HTTPAPI httpd	2.0

Details

Risk description:

This is the list of ports that have been found on the target host. Having unnecessary open ports may expose the target to more risks because those network services and applications may contain vulnerabilities.

Recommendation:

We recommend reviewing the list of open ports and closing the ones which are not necessary for business purposes.

OS Detection

UNCONFIRMED ⓘ

Operating System	Accuracy
Microsoft Windows Server 2012 R2	86%

Details

Vulnerability description:

OS Detection

Server software and technologies

port 80/tcp

UNCONFIRMED ⓘ

Software / Version	Category
 Windows Server	Operating systems
 Microsoft ASP.NET	Web frameworks
 IIS 10.0	Web servers

▼ Details

Vulnerability description:

We noticed that server software and technology details are exposed, potentially aiding attackers in tailoring specific exploits against identified systems and versions.

Risk description:

The risk is that an attacker could use this information to mount specific attacks against the identified software type and version.

Recommendation:

We recommend you to eliminate the information which permits the identification of software platform, technology, server and operating system: HTTP server headers, HTML meta information, etc.

Server software and technologies

port 5357/tcp

UNCONFIRMED ⓘ

Software / Version	Category
 Microsoft HTTPAPI 2.0	Web servers

▼ Details

Vulnerability description:

We noticed that server software and technology details are exposed, potentially aiding attackers in tailoring specific exploits against identified systems and versions.

Risk description:

The risk is that an attacker could use this information to mount specific attacks against the identified software type and version.

Recommendation:

We recommend you to eliminate the information which permits the identification of software platform, technology, server and operating system: HTTP server headers, HTML meta information, etc.

Server software and technologies

port 5985/tcp

UNCONFIRMED ⓘ

Software / Version	Category
 Microsoft HTTPAPI 2.0	Web servers

▼ Details
